

Adult skills research

About the research

Ireland took part in the International survey of adult skills in 2023. The results were released on 10 December 2024. It is an international computer-based household survey of adults aged 16 to 65 years. It is designed as 10-yearly cycles. In Ireland 3,820 people did the survey.

21% of adults surveyed are at level 1 or below in literacy. This means around700,000 people may find it difficult to read instructions and follow them.

25% of adults surveyed are at level 1 or below in numeracy. This means around835,000 people may struggle with working out a percentage or discount.

28% of adults surveyed are at level 1 or below in adaptive problem solving. This means around 935,000 people may struggle with working out how to get from A to B in the fastest time.

What can we learn from PIAAC 2023

| 1 |
|---|
|) |

| 1 | Across all countries surveyed, nearly 20% of adults are considered low performers in all skill domains. These adults struggle with basic skills, such as reading simple texts or solving basic arithmetic and problems. | |
|---|--|--|
| 2 | Literacy and numeracy skills are falling, especially among the least educated. Literacy has fallen more for men than women. | |
| 3 | More education does not guarantee higher skills. | |
| 4 | Adults with highly educated parents have better literacy skill levels than those with less educated parents. | |
| 5 | Training systems may not match up to employers' demands for skills. | |
| 6 | Skilled adults say they are more healthier and happier. Adults with higher numeracy skills, for example, are more likely to: • be employed, • earn a higher wage, • report better health and life satisfaction • more likely to feel they can understand and influence political affairs. | |

About PIACC

- The Central Statistics Office (CSO) carried out a nationally representative survey of adults aged 16 to 65 between September 2022 and June 2023.
- 3,820 people did the survey.
- People took the survey on a tablet in their homes.
- They did an assessment of three information-processing skills in:
 - literacy (reading and understanding written texts),
 - numeracy (understanding and using numerical information), and
 - adaptive problem solving.
